- 1.** Suppose  $X$  and  $Y$  are random variables on  $(\Omega, \mathcal{F}, P)$  and let  $A \in \mathcal{F}$ . Show that if we let  $Z(\omega) = X(\omega)$  for  $\omega \in A$  and  $Z(\omega) = Y(\omega)$  for  $\omega \in A^c$ , then  $Z$  is a random variable.
- 2.** Suppose  $X$  is a continuous random variable with distribution function  $F_X$ . Let  $g$  be a strictly increasing continuous function. Define  $Y = g(X)$ .  
a) What is  $F_Y$ , the distribution function of  $Y$ ? b) What is  $f_Y$ , the density function of  $Y$ ?
- 3.** Suppose  $X$  is a continuous random variable with distribution function  $F_X$ . Find  $F_Y$  where  $Y$  is given by a)  $X^2$  b)  $\sqrt{|X|}$  c)  $\sin X$  d)  $F_X(X)$ .
- 4.** Let  $X : [0, 1] \rightarrow \mathbf{R}$  be a function that maps every rational number in the interval  $[0, 1]$  to 0, and every irrational number to 1. We assume that the probability space where  $X$  is defined is  $([0, 1], \mathcal{B}[0, 1], P)$ , where  $\mathcal{B}[0, 1]$  is the Borel  $\sigma$ -algebra on  $[0, 1]$ , and  $P$  is the Lebesgue measure.  
(a) Is the set of rational numbers in  $[0, 1]$  a Borel set? Show using definition of the Borel  $\sigma$ -algebra on  $[0, 1]$ .  
(b) Is  $X$  a random variable (and why)? If it is, what are its distribution function and expectation? Does  $X$  have a density function? Is  $X$  discrete?
